

**PORTABLE, SIDE-BY-SIDE COMPARTMENT CONTAINER AND
METHOD FOR SEPARATELY STORING AND DISPENSING TWO
CONSUMABLE PRODUCTS, ESPECIALLY CEREAL AND MILK**

5

Abstract

A portable, single-use container for separately containing a first and second consumable products. The container includes a first compartment and a second compartment. The first compartment tapers at an upper portion thereof to form a spout. The spout facilitates dispensing of a contained first consumable product from the first compartment. The second compartment, in turn, tapers at an upper portion thereof to form a mouth. The mouth facilitates dispensing of a second consumable product from the second compartment. The first and second compartments are assembled to one another in a side-by-side fashion such that the spout abuts the mouth. With this configuration, during use, a first consumable product and a second consumable product can be dispensed from the container in close proximity to one another for convenient consumption. In one preferred embodiment, the first compartment contains a volume of milk and the second compartment contains a quantity of cereal.
